

## Integration Guide v.1.1

*Last updated 1/16/2014 by EG*

### Installation Requirements:

- Windows XP or higher
- Broadband Internet Connection (4mbps recommended per user)
- Full access to the following “cloud” resources / URLs / IP addresses outside your local network:
  - [stridelogin.com](http://stridelogin.com)
  - [stridereports.com](http://stridereports.com) (ports 80, 8080)
  - [stridestart.com](http://stridestart.com)
  - [stridedev.com](http://stridedev.com)
  - [api.wordnik.com](http://api.wordnik.com)
  - [cdn.mathjax.org](http://cdn.mathjax.org)
  - [cdnjs.cloudflare.com](http://cdnjs.cloudflare.com)
- Pentium 4 or newer processor that supports SSE2
- 512MB of RAM
- 200MB of hard drive space
- Monitor with 1024x768 resolution

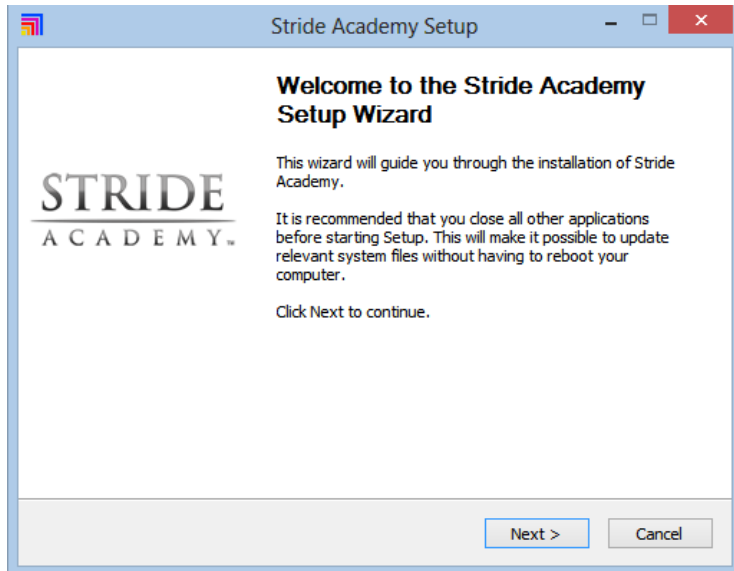

### Step 1: Download the Installer

Download the latest installation package from [http://strideacademy.com/stride\\_player.php](http://strideacademy.com/stride_player.php)

Unpack if needed.

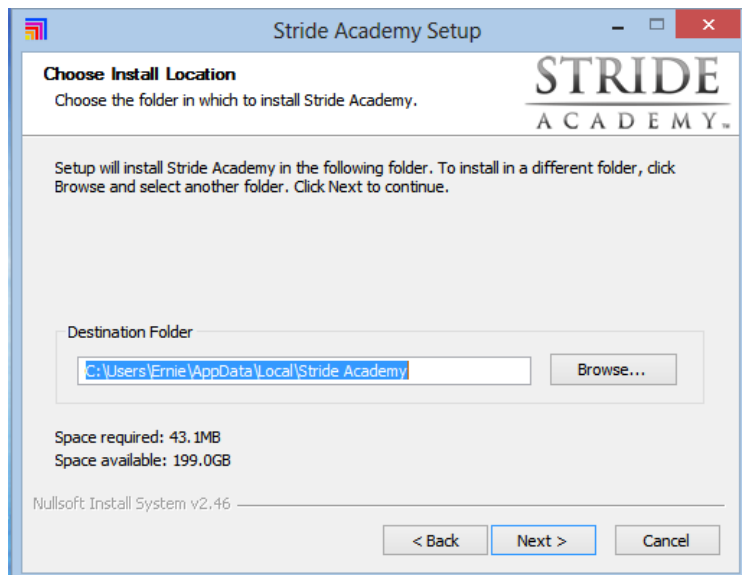

## Step 2: Launch the Installer

When launching the installer, you may be asked to, “Allow this program to make changes to this computer.” or similar. Agree to this.

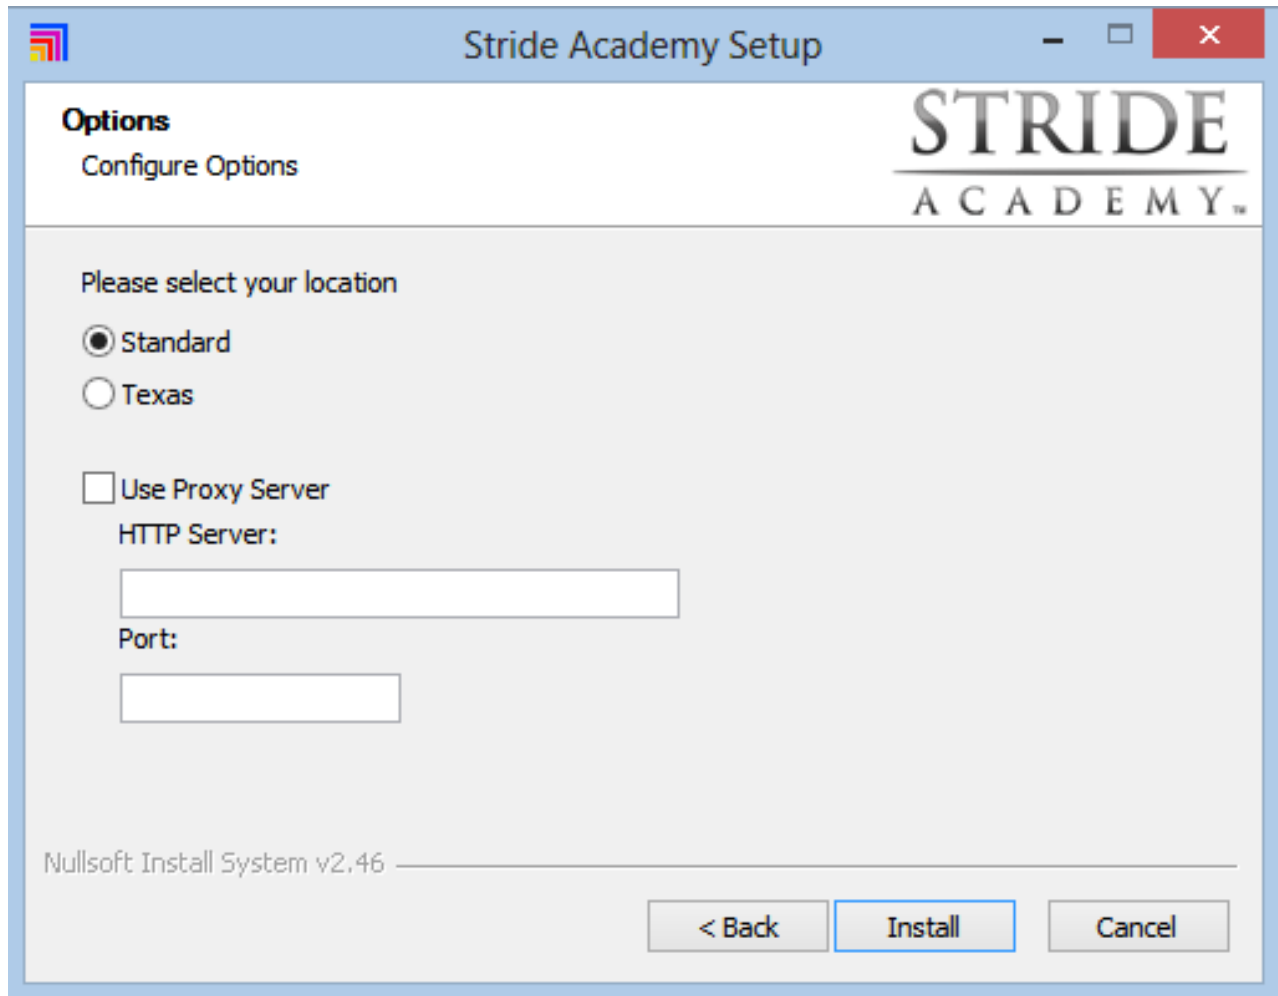

## Step 3: Choose Your Installation Location

If you would like, you can install the program files in a different folder than the default. For most users, the default window is best, and is how Windows prefers to organize your programs.

## Step 4: Select your Location & Proxy Server Options

Texas customers should select the Texas option in order to properly connect to our Texas server. If your network requires you to connect to the web via a proxy server, you can enter those settings here. Ask your network administrator for details on this.

## Step 5: Add an Icon To your Taskbar

Stride Installer automatically places an icon on your windows desktop. You can also add it to your taskbar by dragging and dropping the desktop icon to your taskbar.

## Using Hotkeys

Stride Player loads only the application for your student, but in some cases, you may need to adjust features or reload your homepage.

1. Home shortcut is Alt+Home
2. Clear Cache shortcut is Ctrl+Shift+Del
3. To access Proxy Config, use Ctrl+Shift+F12
